

Ex 9

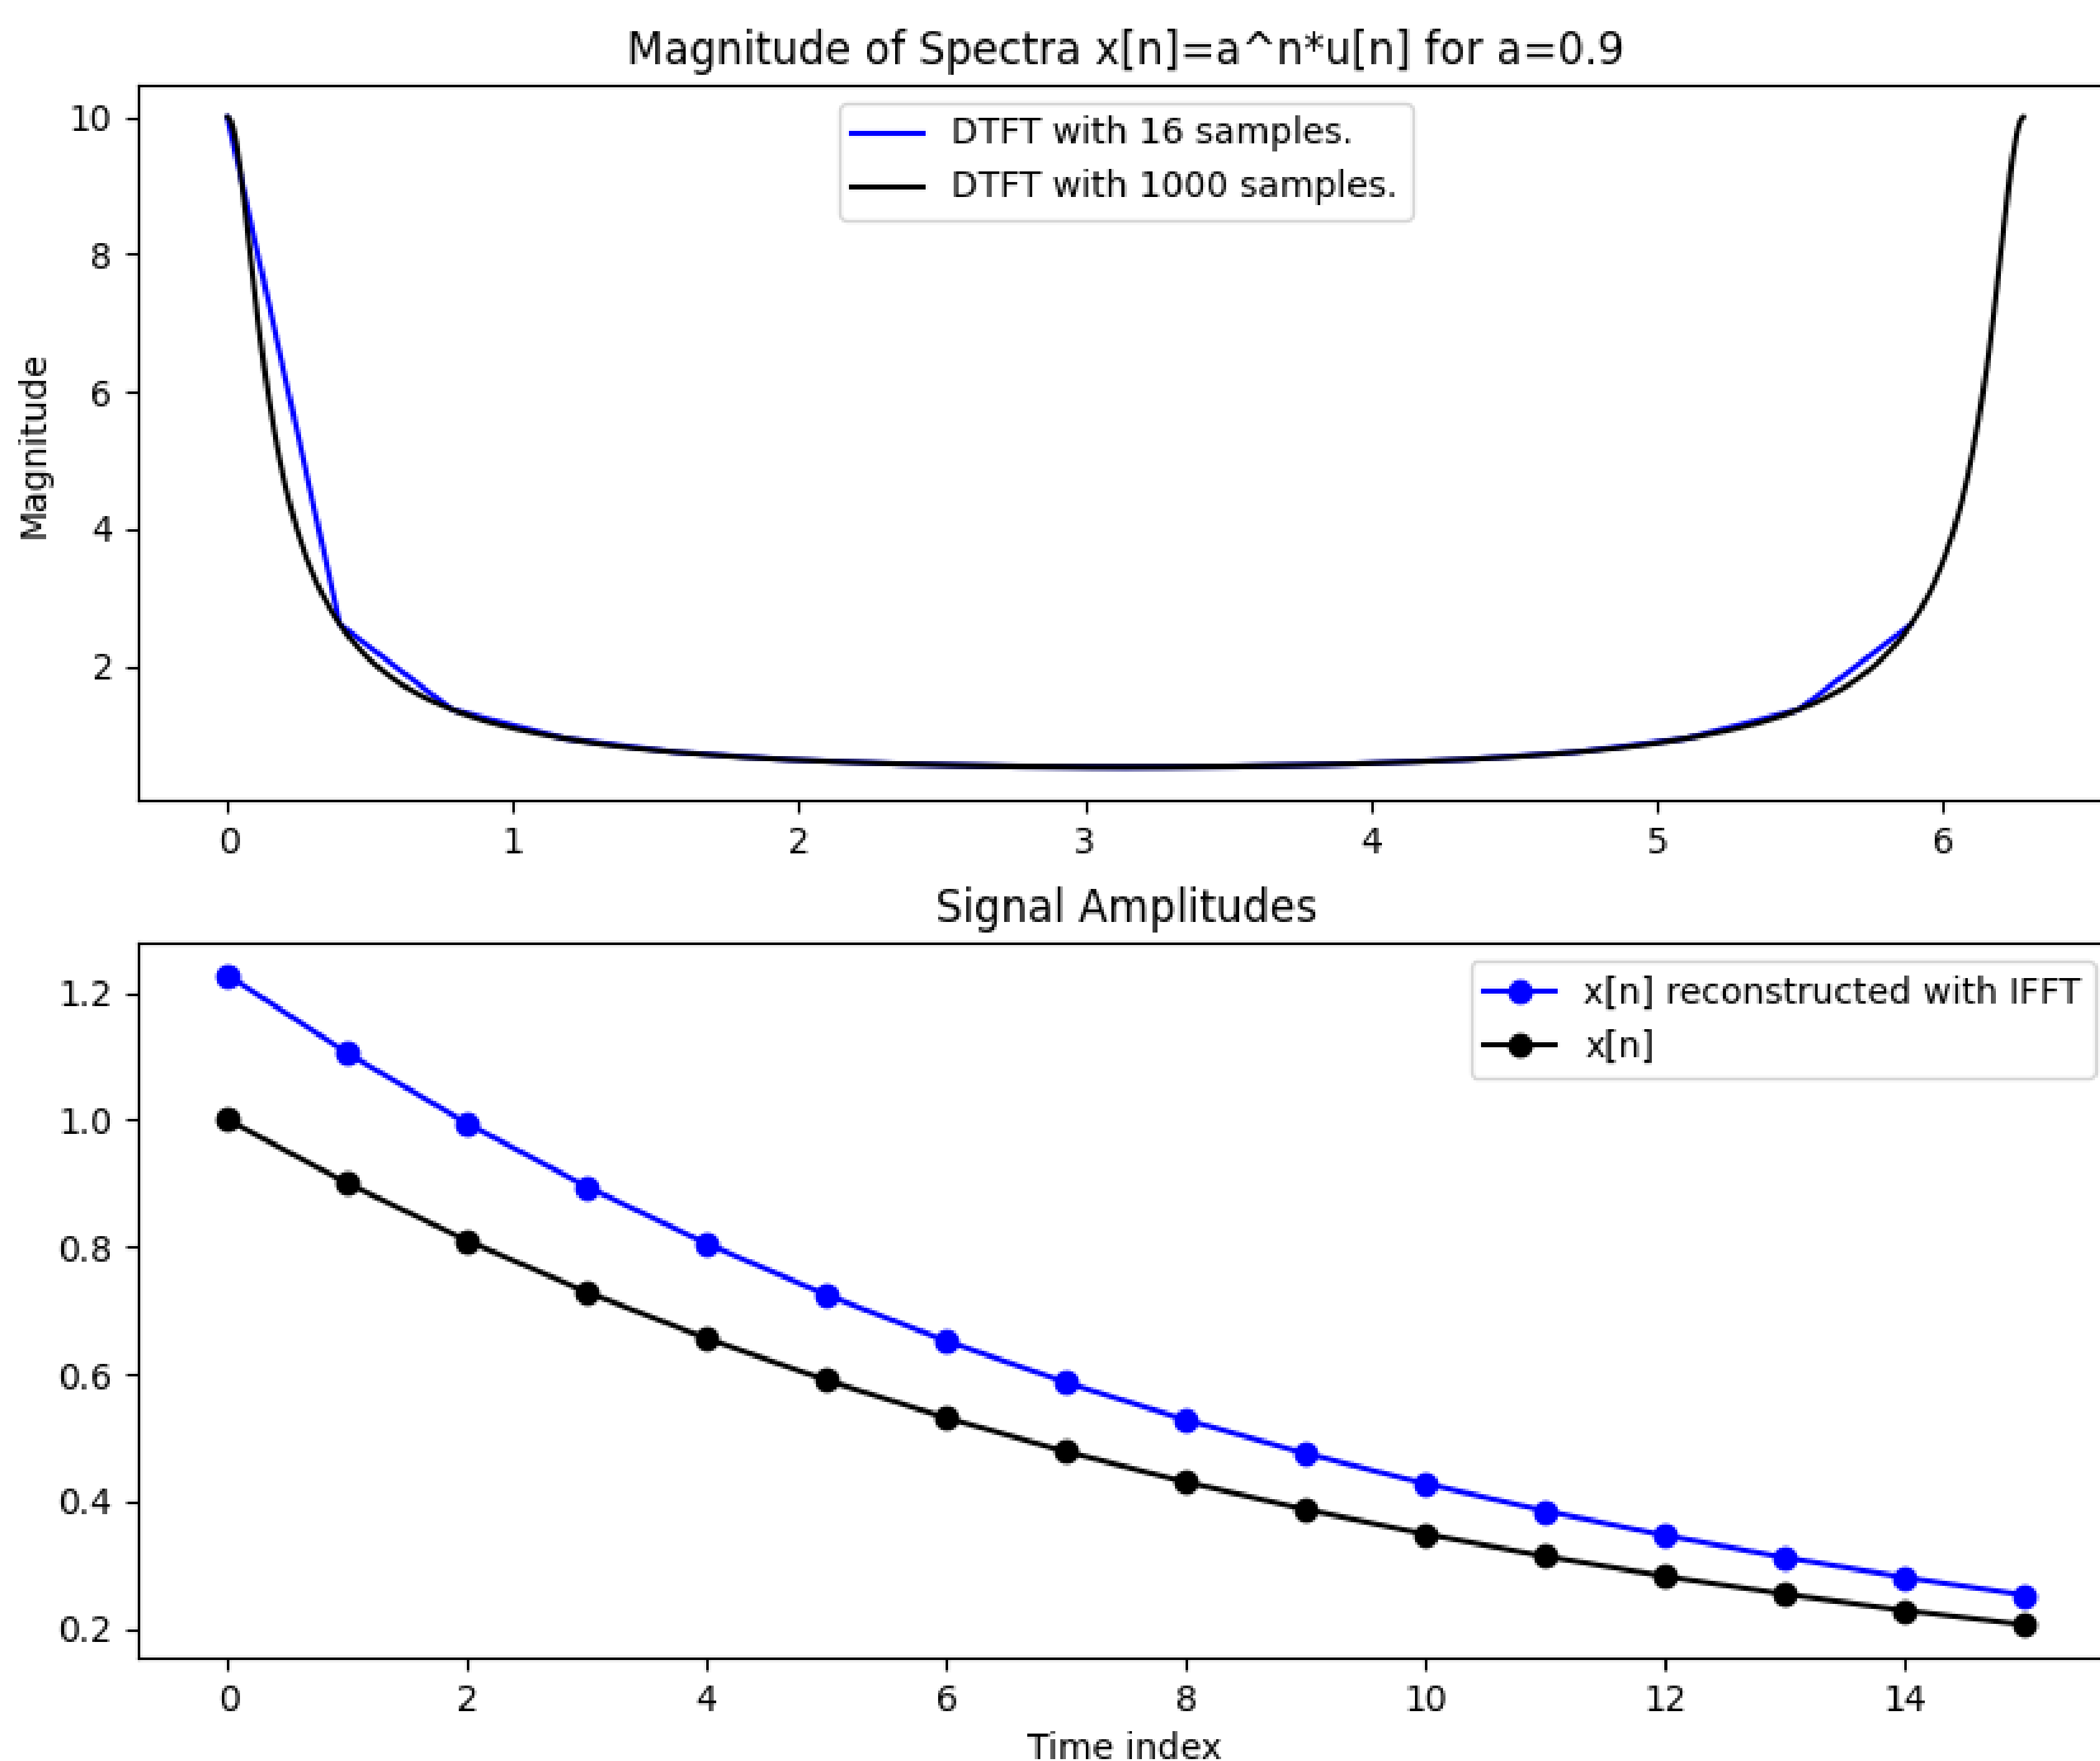

Matias Greiner

Ex 1

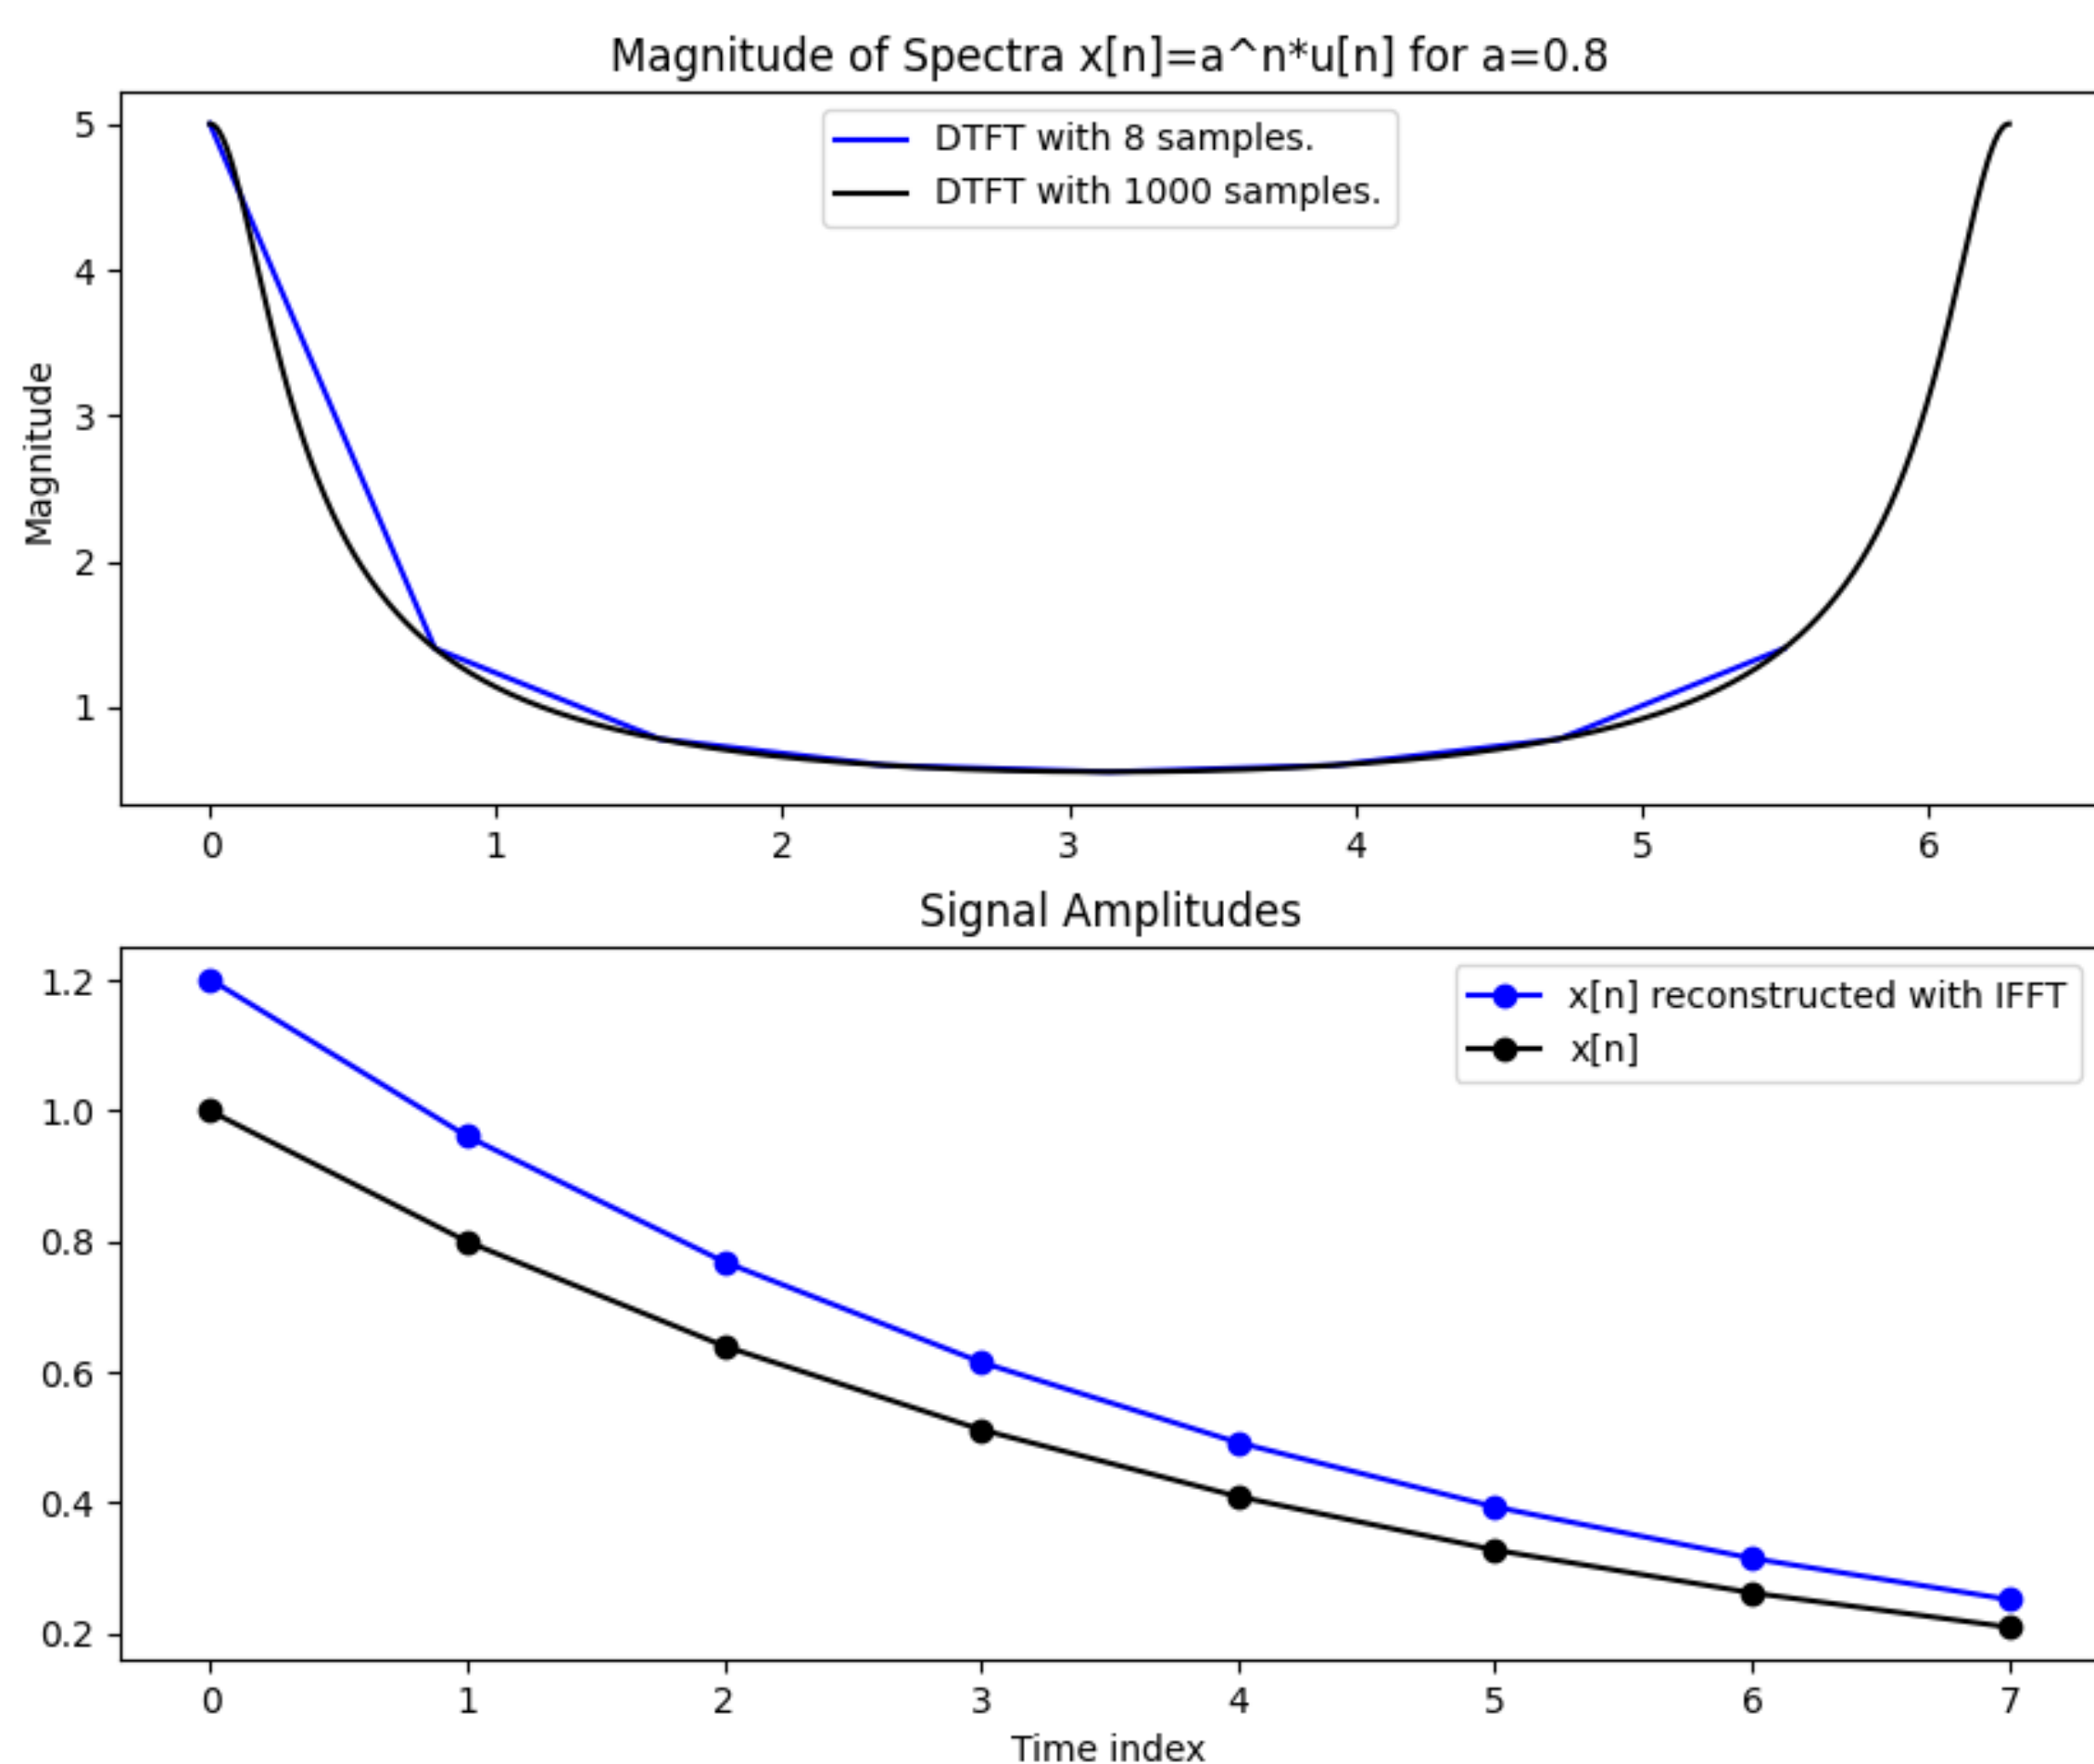

$$8a) x[n] = a^n u[n]$$

For $0 < a < 1$ her is at DTFT blis:

$$\tilde{X}(e^{j\omega}) = \frac{1}{1 - ae^{-j\omega}}$$

b) Viser at for $N=8$ for vi kun er
 tilnærmelse af både $x[n]$ og
 $\text{DTFT}(x[n])$

c) Denne tilnærmelse er nå meget
 bedre!
